Loft Assembly manual

Copyright 2005 lcc

**Place two pieces of loft beside each other.**

**Slide loft pieces together and fasten with screws in front. Make sure loft pieces are tight together or loft may not fit in house.**

**Turn loft around and fasten with screws from either side.**

**Add a 36" 2\*3 brace to the front bottom of loft. Use plenty of screws.**

**Add a 36" 2\*3 brace to the back Bottom of the loft.**

## Loft assembly (cont)

Install the two loft bottoms. This is what the loft will rest on. Install the slanted edge toward the front. From the top of the 2\*3 to the floor it should measure 42 ¼ inches.

Install the loft bottom or main piece, this slides on top of the loft bottoms. Fasten this with screws. Make sure it is secure.

Install left and right railing. **Note how it is fastened on the inside of the 2\*6.**

Install the ladder. Put screws in the top and bottom by the floor. Make sure everything is fastened securely before using.
